

GaneEntry - Access Control System

GaneEntry is an optional fully integrated extension to *GaneTime* which provides a fully functional Access Control system capable of controlling access to and from multiple areas within multiple sites.

GaneEntry provides facilities for both pedestrian and vehicular access and, as an integral part of *GaneTime*, can be configured to automatically record attendance as arrival and departure times from site. Using a range of our own Intelligent Controllers, with readers of various badge technologies (Barcode, Magnetic Stripe, Wiegand, Proximity and Biometric), *GaneEntry* provides a modular and flexible system with distributed intelligence.

Ease of use is a key aspect of the system. By simply defining Access Strategies, *GaneEntry* will immediately disseminate all the necessary information around the system to control **who** is allowed to go **where** and **when**.

The system provides users with a comprehensive range of control capabilities and can satisfy a whole range of access control requirements from a simple "Stand Alone" system to a fully integrated, multi-site operation using composite access and alarm monitoring.

GaneEntry is a reliable, easy to use Access Control System that can easily be extended as your requirements grow.
